## LOADRITE

The Ultimate in Onboard Weighing Systems

## The Loadrite Force's features include:

- Product totals: tracks a product so that daily totals can be produced
- Multiple point weighing: an error alarm sounds to alert the operator if uneven surfaces or speeds affect the weight accuracy
- Split weighing: gives the operator the ability to run individual totals for loading truck and trailer units
- Error alarms: alerts the operator if the bucket load will exceed the truck's target weight or if the lifted weight exceeds the maximum amount that the machine is normally capable of lifting
- Unit conversion: lets you view the lifted weight in either imperial or metric measurements and converts weight to a volumetric measure
- Tip-off weighing: allows you to tip a measured amount of the product off the last bucket to ensure an exact target weight is reached
- Zeroing: helps avoid inaccurate readings if wet or sticky materials build up in the bucket
- Auto add mode: automatically adds the lifted weight to the total every time a load is lifted
- Remote add button: ergonomically designed and mounted closely to the loader controls, so the load can be added at the press of a button (sold separately)
- Multiple languages: seven language options (English, Dutch, German, French, Portuguese, Slovenian and Spanish)
- Physical features: large easily visible LCD display and keys with backlighting for night and low light operation
- Clock: clock function providing time and date information
